

**Movie Theater Mock**  
**Database ERD**

With the customer, there is only one customer that will be ordering from the cart. They are also make multiple transactions if they would like. For concessions that would go into the cart, but it is also optional, therefore I put 0 to many. Since customers are coming to the movie theater, they have to get at least one ticket to put into the cart. The movie goes into the ticket which is only one more for the ticket, but they are have multiple tickets.
